

**EUCLID** CHEMICAL

## PROJECT PROFILE

# SUPERMARKET FREEZER & STORAGE FLOORING REPAIR

### PROJECT DATA

**Location** – Chino Hills, CA

**Application** – Repair

**General Contractor** – Diamond Crete Concrete Coatings

**Material Supplier** – White Cap

### PRODUCTS FEATURED

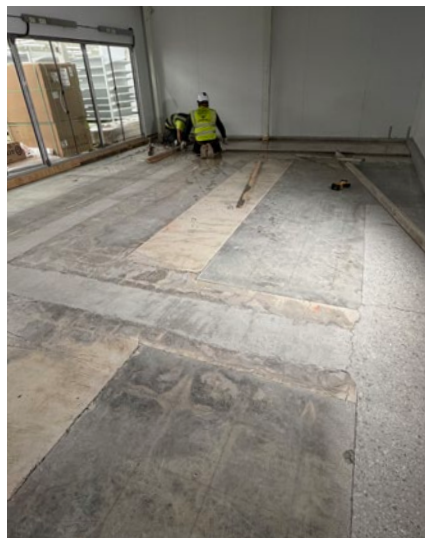

#### **VERSASPEED LS100**

Bonding Agent and Anti-Corrosion Coating for Reinforcement

### SCOPE OF PROJECT

Repair existing concrete slabs

Create slope to floor drains prior to installation of flooring system

## PROJECT SUMMARY

The T&T Supermarket project in Chino Hills, California required rehabilitation of existing concrete slabs in storage and freezer areas before installation of a new epoxy flooring system. The existing surfaces needed repair and regrading to establish the proper slope toward floor drains while minimizing disruption to ongoing construction activities.

VERSASPEED LS100 was selected because it combined high early strength development with extended working time, allowing the contractor to efficiently place and finish repairs while achieving the required floor elevations and drainage slopes. The material's compatibility with existing concrete and high bond performance made it well-suited for resurfacing and repair of the slab-on-grade substrate. Its low-shrinkage formulation helped support long-term durability, while the rapid strength gain allowed the project team to move quickly to subsequent flooring operations.

The project also faced a limited shutdown window, making fast return to service a key requirement. By providing a durable, high-bond repair solution that enabled rapid progression to the flooring phase, VERSASPEED LS100 helped the contractor meet schedule demands while delivering a properly sloped substrate ready for the epoxy flooring system.
